PRESIDENT NIXON'S STATEMENT ON CHINA

Statement by the Prime Minister, Mr William McMahon

I welcome without reservation President Nixon's statement concerning United States relationships with the People's Republic of China and his intention to visit China early next year. I was informed of the purport of his statement in advance.

The President's purpose of normalising relationships with China has been the publicly-announced policy of the Australian Government for some time.

Indeed, President Nixon's anxiety to "seek normalisation of relations and exchange views on questions of concern" precisely describes what we ourselves have been seeking to do by our approaches through diplomatic channels in Paris.

In particular, I want to draw the attention of the Australian people to President Nixon's statement that the action he is taking will "not be at the expense of old friends".

In the future, Australia's policies and actions will be guided by these principles as they have been in the past.

I share wholeheartedly the President's view that all will gain from a reduction of tension between the United States and the People's Republic of China. I wish him good fortune in an initiative that has the full support of Australia.

I emphasise that President Nixon's statement relates to the normalisation of relationships with China in the interests of world peace.

CANBERRA,
16 July 1971

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both manual data entry and the use of specialized software tools. The goal is to ensure that the data is both accurate and easy to interpret.

The third part of the document provides a detailed breakdown of the results. It shows that there is a clear trend in the data, which is consistent with the initial hypothesis. This finding is significant as it provides strong evidence for the proposed model.

Finally, the document concludes with a series of recommendations for future research. It suggests that further studies should be conducted to explore the underlying causes of the observed trends. This will help to refine the model and improve its predictive power.
